Diabetes Education

According to the American Diabetes Association, in 2011 25.8 million people in the United States had diabetes; 79 million were prediabetic, numbers that continue to rise. Diabetes leads to a number of clinical complications including heart disease and stroke, high blood pressure, blindness, kidney disease, neuropathy, and amputation. This bibliography highlights some of the published health education interventions aimed at preventing people from developing diabetes, and to help manage the disease for those already diagnosed.

2013

Bolin JL, Ory MG, Wilson AD, Salge L. Diabetes Education Kiosks in a Latino Community. *The Diabetes Educator*. 2013.
